

7-19-0 + Mg 0.6%, B 0.1%, Cu 0.1%, Co 0.005%, Fe 0.3%, Mn 0.3%, Mo 0.005%, Zn 0.3% plus Vodophos chemistry

Fast acting Liquid concentrate fertilizer

Even in ideal conditions soil nutrients can become 'locked up' and unavailable to the plants roots. In adverse conditions growth, yield and quality is reduced by poor soil conditions, drought, salinity, and pest and disease damage.

Vodophos[®] FORT contains high levels of all nutrients in highly available forms to feed the plant when the roots cannot. Containing **Vodophos** patent sets a new benchmark for foliar fertilizer performance.

Benefits of Vodophos include:

- Fast acting patent protected **Vodophos** chemistry
- Increased yield - independently proven
- Earlier maturity through **Vodophos** chemistry
- Corrects deficiencies quickly

Vodophos[®] FORT effectively reduces transient deficiencies during vigorous growth, flower and fruit development – allowing the plant to achieve its maximum potential.

Vodophos[®] FORT has shown consistently good results on many crops worldwide in an international field trial program.

Recommendations for application:

Foliar application: 2-3lts / ha as foliar spray in minimum 100lts water. Or use a 0.5% spray solution and spray till run-off. Avoid spraying during direct sun

CROP	TIMING
Fruit trees, vines and hops	15-20 day intervals from leaf emerge until harvest
Bananas	15-20 day intervals from flowering to harvest
Potatoes	15-20 day intervals from 5-leaf stage
Cucumber / Melon	15-20 day intervals from 4-leaf stage
Vegetables	15-20 day intervals from 3-leaf stage
Tomato/Pepper/Eggplant	15 day intervals from 4-leaf stage till harvest
Strawberry/Soft Fruit	15 - 20 day intervals from leaf emergence
Citrus	Following each leaf flush
Ornamentals	Apply weekly during stress conditions
